ANANDA PARAMANICK

1

Your Hook Is Missing 2 Layers

Most editors build one hook. The reels that hold attention build three at once.

A complete hook runs verbal, visual, and text simultaneously in the first frame.

MISTAKE

VERBAL LAYER

VISUAL LAYER

2

Verbal Hook: Open a Loop

What comes out of your mouth in the first second must force a response or create a question the brain needs answered.

Use a bold claim, a contradiction, or a question that would feel painful to leave unanswered.

3

Visual Hook: Move Before You Speak

The eye processes motion before the brain processes words. Your first frame needs something to track.

Fast B-roll, a physical gesture, or an unexpected object gives the eye an anchor before your hook even lands.

4

Text Hook: Give Them a Reason

One overlay before
the subject speaks
tells the viewer
exactly why staying
is worth their time.

*One line. High contrast.
Positioned so it is the
first thing read before
anything else in the frame.*

5

Stack All Three at Once

The reels that never drop in the first 2 seconds are almost always running all three hooks simultaneously.

TEXT

T ***YOU'RE DOING THIS WRONG.***

B-ROLL

Verbal opener plus motion in frame plus one text line. One second. Three locks on the same door.

6

Audit Your Next Hook

Before your next edit, check: verbal, visual, and text. If one is missing, that is your retention problem.
